Benefits of cloud computing

00:00I love today's module because I get to do one of my most favorite things: nerd out about the cloud.

00:06I'm a huge fan, but I also know that, as a cloud data professional, my enthusiasm

00:10level may come on a little strong for folks who don't have a cloud computing background.

00:16That's why it's important to really understand the cloud and its many advantages, so that you

00:20can explain it clearly to others in a way that is easy to understand, and hopefully exciting!

00:26Let's first learn about accessibility.

00:29One of the big advantages of a cloud computing model is that organizations can access and

00:33manage data, software, storage, and cloud infrastructure from any location at any time through the internet.

00:40They don't need to be physically present where the hardware and software are installed.

00:45And they don't need their cloud service provider's assistance when they need more data.

00:50Next is scalability, which means to easily expand or upgrade computing resources to meet changing needs.

00:57Scalability eliminates physical computing limitations.

01:00Now, the benefit of cost savings is pretty straightforward.

01:05Organizations only pay for the computing resources used.

01:09In a cloud computing model, organizations get what's called a measured service.

01:14Similar to household utilities like electricity and water, users are charged only for what they

01:19use, based on the number of transactions, the storage volume, and the amount of data transferred.

01:25This helps make all kinds of business initiatives more profitable and sustainable.

01:30The advantage of security is also pretty straightforward.

01:34With cloud computing, an organization's systems, data, and computing resources are protected from theft, damage, loss, and unauthorized use.

01:44Cloud computing security is generally recognized as stronger than the security of a traditional network infrastructure.

01:51This is because data is located in data centers that few people have access to.

01:56Plus, the information stored on cloud servers is encrypted, meaning it's not something that's easily broken into.

02:03Ok, moving on to efficiency.

02:05There's a lot that's efficient about cloud computing, but one of the main advantages is that organizations can provide immediate access to new and upgraded applications.

02:15There's no time wasted worrying about the state of network infrastructure or going through a costly or time-consuming implementation process.

02:23There are tons of amazing things about the cloud!

02:27And now we've come to freeing resources, so users can focus on more value-added tasks.

02:33In the cloud field, we refer to this as managed services.

02:38A managed service involves a third-party provider taking care of the ongoing maintenance, management, and support of an organization's cloud infrastructure and applications.

02:47This, in turn, gives users lots more time to focus on other work.

02:52It's like a mechanic who automatically comes to you for annual inspections and services, rather than you spending many hours in a mechanic shop waiting for services.

03:01That's because all of the ongoing maintenance and management from the cloud happens automatically in the background; a user doesn't have to initiate it.

03:11Because cloud computing is super versatile, it offers a wide range of common uses including disaster recovery, data storage, and large-scale data analysis that provides users with significant benefits.

03:24Let's start with disaster recovery.

03:27Using cloud computing in disaster recovery means having access to more data centers to ensure that data and information is safe and secure during an emergency.

03:36The next benefit is data storage.

03:39Data storage helps streamline data centers by storing large volumes of data, which enables easier access to the data, analysis of the data, and backup of the data.

03:48Then, we have large-scale data analysis.

03:52Large-scale analysis offers easy and quick access to multiple data sources, and intuitive user interfaces to query and explore the data.

04:01This speeds up the overall process of discovering data-driven insights.

04:05Isn’t cloud computing amazing?

04:08Users can say goodbye to the limitations of traditional data storage and computing methods, and enjoy the world of advantages that it offers.

04:16And data analysts can help users seize these advantages with expert cloud data analysis skills!
