

## Test your knowledge on using formulas in spreadsheets

1. What is the operator for a formula that uses division?

1 / 1 point

- ☒ Forward slash (/)
- ☐ Asterisk (\*)
- ☐ Colon (:)
- ☐ Backward slash (\)

✓ Correct

A forward slash (/) is the operator for a formula that uses division.

2. Fill in the blank: A cell \_\_\_\_\_ is composed of the letter of the cell's column and the number of its row.

1 / 1 point

- ☐ formula
- ☐ range
- ☒ reference
- ☐ value

✓ Correct

A cell reference is composed of the letter of the cell's column and the number of its row.

3. What error message will appear when a formula cannot be interpreted as it is written?

1 / 1 point

- ☒ **ERROR**
- ☐ DIV
- ☐ N/A
- ☐ LOOKUP

✓ Correct

The error message **ERROR** (also called a parsing error) will appear when a formula cannot be interpreted as it is written.

4. What should be done to resolve a **NAME** error?

1 / 1 point

- ☐ Do not divide a value by zero or an empty cell.
- ☒ Ensure the formula name is correct.
- ☐ Make sure cell references have not been deleted.
- ☐ Insert a comma between the cell ranges.

✓ Correct

To resolve a **NAME** error, ensure the formula name is correct.
