

Communicating with your team

Hey, welcome back. So far you've learned about things like spreadsheets, analytical thinking skills, metrics, and mathematics. These are all super important technical skills that you'll build on throughout your data analytics career. You should also keep in mind that there are some non-technical skills that you can use to create a positive and productive working environment. These skills will help you consider the way you interact with your colleagues as well as your stakeholders. We already know that it's important to keep your team members' and stakeholders' needs in mind. Coming up, we'll talk about why that is. We'll start learning some communication best practices you can use in your day-to-day work. Remember, communication is key. We'll start by learning all about effective communication and how to balance team member and stakeholder needs. Think of these skills as new tools that'll help you work with your team to find the best possible solutions. Alright, let's head on to the next video and get started.
