

Congratulations! Course wrap-up

Now that you're done, you're officially ready to take on the next course. Awesome job. But before I tell you about what's ahead, let's take a moment to think about what we've covered so far in the first step of the data analysis process. In this course, we explored effective questions and we learned how to use quantitative and qualitative data, metrics and math to connect the dots. We also covered spreadsheet basics, how to apply structured thinking and key communication skills for working with stakeholders and team members. That's a lot! Now it's time to take what you learned into the next course, where you'll tackle the next step of the data analysis process, prepare your data. Hallie is going to take over from here. You might remember her from the beginning of the first course! She'll guide you as you learn new important tools for your work, like data types and data structures; bias and credibility in analytics; databases; organizing and protecting your data; and the data community. Thanks for sticking with me through this course. When you're ready, you can go ahead to the first video in the next course. Good luck. You're going to do great.
