Term

First-party data

Second-party data

Third-party data

Answer: Second-party data

Tap the term that matches the definition:

Data sold by a provider that didn't collect the data themselves

Term

First-party data

Second-party data

Third-party data

Answer: Third-party data

Select **Next** to continue

Data that is not organized in any easily identifiable manner

Term

Structured data

Unstructured data

Discrete data

Continuous data

Answer: Unstructured data

Data organized in a certain format such as rows and columns

Term

Structured data

Unstructured data

Discrete data

Continuous data

Answer: Structured data

Data that is counted and has a limited number of values

Term

Structured data

Unstructured data

Discrete data

Continuous data

Answer: Discrete data

Data that is measured and can have almost any numeric value

Term

Structured data

Unstructured data

Discrete data

Continuous data

Answer: Continuous data

Tap the term that matches the definition:

Qualitative data with a set order or scale

Term

Nominal data

Ordinal data

Internal data

External data

Answer: Ordinal data

Data that lives within a company's own systems

Term

Nominal data

Ordinal data

Internal data

External data

Answer: Internal data

Qualitative data that is categorized without a set order

Term

Nominal data

Ordinal data

Internal data

External data

Answer: Nominal data

Data that lives and is generated outside of an organization

Term

Nominal data

Ordinal data

Internal data

External data

Answer: External data

You're done!

As a data analyst, it's your job to understand the data—where it comes from, how it's organized, and how reliable it is.
