

Test your knowledge on data formats and structures

1. What type of data is the height of a skyscraper?

1 / 1 point

- ☐ Qualitative
- ☐ Discrete
- ☐ Nominal
- ☒ Continuous

✓ **Correct**

The height of a skyscraper is continuous data, which is measured and can have almost any numeric value.

2. In data analytics, what is the term for data that is generated from, and lives, outside of an organization?

1 / 1 point

- ☐ Internal
- ☐ Outer
- ☐ Peripheral
- ☒ External

✓ **Correct**

In data analytics, external data is generated from, and lives, outside of an organization.

3. What are the key characteristics of unstructured data? Select all that apply.

0.8 / 1 point

☒ Unorganized

✔ **Correct**

Unstructured data is not organized in any easily identifiable manner, although it may have an internal structure.

☒ Clearly identifiable construction

✘ **This should not be selected**

Unstructured data is not organized in any easily identifiable manner, although it may have an internal structure.

☒ May have an internal structure

✔ **Correct**

Unstructured data is not organized in any easily identifiable manner, although it may have an internal structure.

☐ Fits neatly into rows and columns

4. Fill in the blank: A data model is used to organize _____ and how they relate to one another.

1 / 1 point

☐ spreadsheet fields

☒ data elements

☐ data visualizations

☐ database structures

✔ **Correct**

A data model is used to organize data elements and how they relate to one another. Data elements are pieces of information, such as people's names, account numbers, and addresses.
