

Test your knowledge on metadata

1. A large company has several databases across its many departments. What kind of metadata describes how many locations contain a certain piece of data?

1 / 1 point

- ☒ Structural
- ☐ Administrative
- ☐ Descriptive
- ☐ Representative

✔ **Correct**

Structural metadata describes how many locations contain a certain piece of data. It indicates how a piece of data is organized and whether it is part of one or more than one data collection.

2. A large metropolitan high school gives each of its students an ID number to differentiate them in its database. What kind of metadata are the ID numbers?

1 / 1 point

- ☐ Representative
- ☐ Structural
- ☐ Administrative
- ☒ Descriptive

✔ **Correct**

The ID numbers are descriptive metadata. Descriptive metadata describes a piece of data and can be used to identify it at any time.

3. An international nonprofit organization wants to merge third-party data with its own data. Which of the following actions will help make this process successful? Select all that apply.

1 / 1 point

- ☒ Use metadata to standardize the datasets.

✔ **Correct**

Using metadata to standardize the data and evaluate the third-party data's quality and credibility will help make this process successful.

- ☒ Use metadata to evaluate the third-party data's quality and credibility.

✔ **Correct**

Using metadata to standardize the data and evaluate the third-party data's quality and credibility will help make this process successful.

- ☐ Alter the internal metadata to more closely reflect the incoming metadata.

- ☐ Replace the incoming data's metadata with its own company metadata.

4. Fill in the blank: Data _____ is a process data professionals use to ensure the formal management of their organization's data assets.

1 / 1 point

- ☐ sourcing
- ☐ storage
- ☒ governance
- ☐ organization

✔ **Correct**

Data governance is a process data professionals use to ensure the formal management of their organization's data assets. This gives them better control of their data and helps them manage issues related to data security and privacy, integrity, usability, and internal and external data flows.
