

Test your knowledge on using SQL with large datasets

1. Fill in the blank: When using SQL, the _____ clause can be used to filter a dataset of customers to only include people who have made a purchase in the past month.

1 / 1 point

- ☐ SELECT
- ☐ FROM
- ☐ FILTER
- ☒ WHERE

✔ Correct

When using SQL, the **WHERE** clause can be used to filter a dataset of customers to only include people who have made a purchase in the past month. **WHERE** is the section of a query that specifies criteria that the requested data must meet.

2. Which cases are most often used for column names in a database table and represent a SQL best practice? Select all that apply.

1 / 1 point

☒ Snake case

✔ Correct

Column names should be written in lowercase. Or, for names with multiple words, snake case is used to separate each word with an underscore to make it more readable.

☒ Lowercase

✔ Correct

Column names should be written in lowercase. Or, for names with multiple words, snake case is used to separate each word with an underscore to make it more readable.

☐ Camel case

☐ Sentence case

3. A database table is named WebTrafficAnalytics. What type of case is this?

1 / 1 point

- ☐ Lowercase
- ☐ Snake case
- ☒ Camel case
- ☐ Sentence case

✔ Correct

WebTrafficAnalytics is in camel case. Camel case means that the first letter of each word is capitalized; however, capitalizing the first letter is optional.

4. What can be removed from the following query without preventing it from running or changing the results?

1 / 1 point

```
SELECT *  
FROM `Uni_dataset.new_table`  
WHERE ID = 'Lawrence'
```

- ☐ The asterisk (*)
- ☒ Backticks (`)
- ☐ SELECT
- ☐ WHERE

✔ Correct

The backticks can be removed from the name of the dataset without preventing the query from running. Backticks can make queries more readable, but they are optional.
