

Test your knowledge on securing data

1. Fill in the blank: Data security involves adopting _____ in order to protect data from unauthorized access or corruption.

1 / 1 point

- ☒ safety measures
- ☐ foldering procedures
- ☐ data validation
- ☐ metadata strategy

✓ **Correct**

Data security involves adopting safety measures in order to protect data from unauthorized access or corruption.

2. What data-security measure uses a unique algorithm to alter data and make it inaccessible without the algorithm?

1 / 1 point

- ☐ Hidden tabs
- ☐ AI authentication
- ☐ Password-protection
- ☒ Encryption

✓ **Correct**

Encryption uses a unique algorithm to alter data and make it inaccessible without the algorithm.

3. When using tokenization as a safety measure, what is replaced as a randomly generated token?

1 / 1 point

- ☐ The user's search history
- ☐ The line of code from a query
- ☐ The user's location
- ☒ The data elements to be protected

✓ **Correct**

When using tokenization as a safety measure, the data elements to be protected are replaced as a randomly generated token.

4. What data-security practice enables all collaborators within a file to track changes, such as who made what edits to the file, when they were made, and why?

1 / 1 point

- ☐ Foldering
- ☒ Version control
- ☐ Authentication
- ☐ Password-protection

✓ **Correct**

Version control enables all collaborators within a file to track changes, such as who made what edits to the file, when they were made, and why.
