

Self-Reflection: Add Kaggle to your online presence

Activity Overview

Now that you have been introduced to the Kaggle platform, you can pause for a moment and apply what you are learning. In this self-reflection, you will consider your thoughts about your online presence and respond to brief questions.

This self-reflection will help you develop insights into your own learning and prepare you to connect your knowledge of Kaggle to your goals for your online presence. As you answer questions—and come up with questions of your own—you will consider concepts, practices, and principles to help refine your understanding and reinforce your learning. You’ve done the hard work, so make sure to get the most out of it: This reflection will help your knowledge stick!

Follow the instructions to complete each step of the activity. Then answer the question at the end of the activity before going to the next course item.

To start on Kaggle, you should set up a profile. Your Kaggle profile page is a collection of all of your work and accomplishments on Kaggle. Check out an example profile page to explore how a profile can be used to share information:

[Heads or Tails](#)

As you browse the Kaggle profile for Heads or Tails, you can also observe the work they did to reach high ranks in each category. They also include links. For example, they include a link from their profile to their personal blog and videos. This allows them to share their Kaggle profile with prospective employers in order to highlight their skills and progress.

Building up your Kaggle profile, or any other form of social media presence, takes time. Being patient with your progress and engaging consistently will draw more attention to your work.

Before moving into the next section, take a few minutes to look at different Kagglers' profiles, and think about what they're doing that inspires you. If you encounter a profile of someone whose work you'd like to follow, click the **Follow User** button on their profile.

To make it easier to get started on Kaggle, begin by reviewing how the Kaggle community operates. You can do this by reading through their [Community Guidelines](#) and checking out their [Getting Started on Kaggle YouTube playlist](#).

Then, spend time exploring through the [Kaggle Winner's blog posts](#) = and checking out the [Learn](#) section. When you are ready to reflect, copy the url of a blog post that resonates with you, and be ready to share it in the upcoming discussion activity.

1.

Question 1

Reflection

Consider Kaggle's community features and how you might use social media yourself:

- How might you use interactive notebooks and the data community (specifically the curated blog posts and learn section) to expand your understanding of real-world data sets?
- How can you use Kaggle to help improve your social media impact and meet your professional goals, and how could your impact compare to the goals outlined in the chosen blog article?
- Imagine your ideal data analyst social media presence. What would you like to put on your profile? What type of data set would you like to create and share through your Kaggle profile?

Reflect on your professional social media goals and think about how you can enhance your Kaggle profile to establish an online presence.

Now, paste the url address of the blog for reference and write 2-3 sentences (40-60 words) in response to each of these questions. Enter your response in the text box below.

I will explore the Kaggle dataset, and also when I do any project, I upload my work. Yeah, I will also post my blog article on Kaggle so that the data community will read my article, and I will be a popular writer on Kaggle for posting the valuable content. I would like my project data, which will be my genuine work, and then I will upload it. Because when I do work with genuine world-class data, then it will help the community and the world.

Feedback

Great work reinforcing your learning with a thoughtful self-reflection! A good reflection on this topic would include how you will create your own online presence based on Kaggle's features or that of another social media platform.

Taking charge of your online presence and establishing a record of your hard work is crucial to honing your skills and getting a job as a data analyst. Going forward, you can read through discussion posts that interest you on Kaggle or another data science forum. Engage with them by adding your thoughts or asking follow-up questions to improve your online presence and learn new data skills.
