

Data-cleaning with SQL functions

Data-cleaning SQL functions
Matching exercise

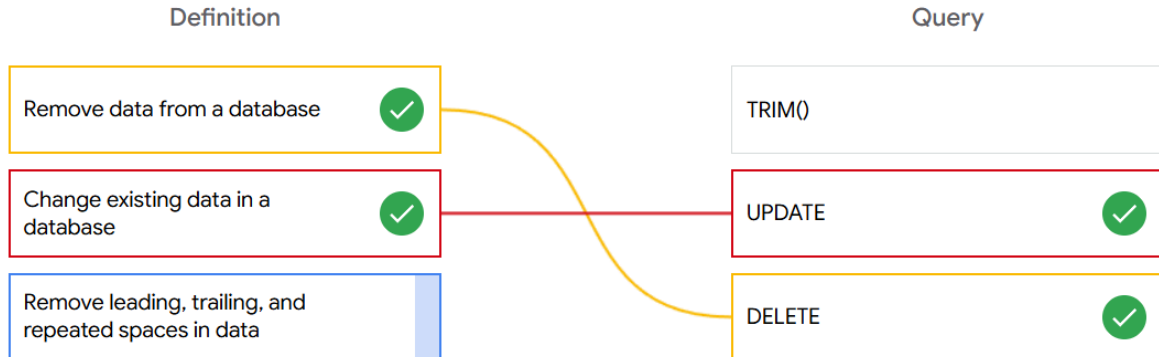

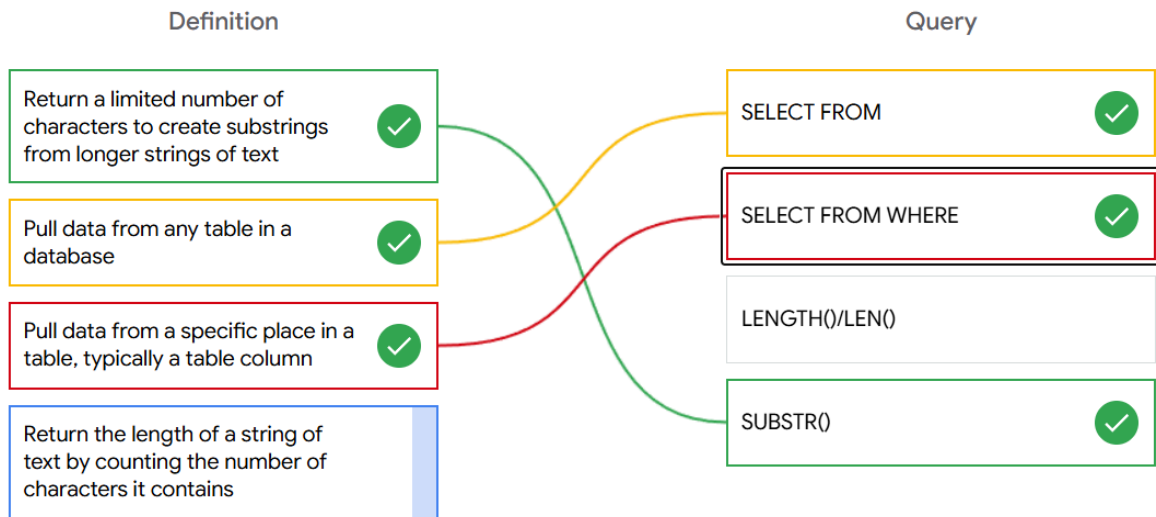

Know your data types

In this matching exercise, match each SQL function definition to the correct SQL query.

Do you know your data-cleaning queries?

Match each definition with the correct SQL function. First, select a definition. Then, select a query to find out if it's a match.

Definition

- ✓ Add strings together to create new text strings that can be used as unique keys
- ✓ Convert data from one datatype to another
- ✓ Add new data into a database
- Return non-null values in a list

Query

- ✓ INSERT INTO
- ✓ CAST()
- ✓ CONCAT()
- COALESCE()

You're done!

As a data analyst, you'll use these SQL functions to prepare and clean data during the prepare phase.
