

Test your knowledge on documenting the cleaning process

1. What objectives can be achieved by documenting the evolution of a dataset? Select all that apply.

1 / 1 point

☒ Determine the quality of the data

✓ **Correct**

Documenting the evolution of a dataset makes it possible to recover data-cleaning errors, inform other users of changes, and determine the quality of the data.

☒ Inform other users of changes

✓ **Correct**

Documenting the evolution of a dataset makes it possible to recover data-cleaning errors, inform other users of changes, and determine the quality of the data.

☒ Recover data-cleaning errors

✓ **Correct**

Documenting the evolution of a dataset makes it possible to recover data-cleaning errors, inform other users of changes, and determine the quality of the data.

☐ Communicate data insights to stakeholders

2. Fill in the blank: After a change to a query is submitted, all team members will be able to access the new query once they _____ the most up-to-date version control system.

1 / 1 point

☐ revert from

☒ sync to

☐ upload

☐ copy

✓ **Correct**

After a change to a query is submitted, all team members will be able to access the new query when they sync to the most up-to-date version control system. Syncing ensures the most up-to-date version of the query is the one being accessed.

3. What information is typically included in a changelog? Select all that apply.

1 / 1 point

☒ A description of the change

☒ **Correct**

A changelog typically includes the component that changed and the reason why; a description of the change, and the date. It also includes the people who made and approved the change and the version number.

☐ Frequently asked questions about the change

☒ The date of the change

☒ **Correct**

A changelog typically includes the component that changed and the reason why; a description of the change, and the date. It also includes the people who made and approved the change and the version number.

☒ The component that changed and the reason why

☒ **Correct**

A changelog typically includes the component that changed and the reason why; a description of the change, and the date. It also includes the people who made and approved the change and the version number.

4. A data professional makes a change to a file. Then, they ask a colleague to evaluate the change to identify any potential issues. What does this scenario describe?

1 / 1 point

☐ Code commit

☐ Sync

☒ Code review

☐ Revert

☒ **Correct**

This scenario describes code review, which is an informal review of a change. Once the reviewer approves the change, the analyst submits the updated version to the company's version control system. This is called a code commit.
