

Test your knowledge on manual data cleaning

1. Which of the following tasks are involved in the verification process? Select all that apply.

1 / 1 point

☒ Considering whether the data is credible and appropriate for the project

✓ **Correct**

Verification confirms that data cleaning was well executed and the resulting data is accurate and reliable. To verify data, analysts recheck the data-cleaning effort, manually fix errors, and consider whether the data is credible and appropriate for the project.

☒ Manually fixing errors found in the data

✓ **Correct**

Verification confirms that data cleaning was well executed and the resulting data is accurate and reliable. To verify data, analysts recheck the data-cleaning effort, manually fix errors, and consider whether the data is credible and appropriate for the project.

☒ Rechecking the data-cleaning effort

✓ **Correct**

Verification confirms that data cleaning was well executed and the resulting data is accurate and reliable. To verify data, analysts recheck the data-cleaning effort, manually fix errors, and consider whether the data is credible and appropriate for the project.

☐ Asking stakeholders to check and confirm the data is clean

2. Which function enables a data professional to count the total number of spreadsheet values within a specified range?

1 / 1 point

☐ **WHOLE**

☐ **TOTAL**

☐ **SUM**

☒ **COUNTA**

✓ **Correct**

The **COUNTA** function enables a data professional to count the total number of spreadsheet values within a specified range.

3. Fill in the blank: Changelogs are files containing _____ ordered lists of modifications made to a project.

1 / 1 point

- ☒ chronologically
- ☐ alphabetically
- ☐ randomly
- ☐ directionally

✔ Correct

Changelogs are files containing chronologically ordered lists of modifications made to a project. They are usually organized by version and include the date followed by a list of added, improved, and removed features.

4. A data professional discovers that SUV is spelled SWV in the database column `car_types`. Which **CASE** clause will enable them to correct the misspellings?

1 / 1 point

- ☒ `CASE WHEN car_types = 'SWV' THEN 'SUV'`
- ☐ `CASE car_types = 'SWV' THEN 'SUV'`
- ☐ `WHEN CASE car_types = 'SWV' THEN 'SUV'`
- ☐ `WHEN car_types CASE = 'SWV' THEN 'SUV'`

✔ Correct

To correct the misspelling, the correct clause is `CASE WHEN car_types = 'SWV' THEN 'SUV'`.
