

Congratulations! Course wrap-up

Great job on finishing this course. You've covered a lot of ground already and learned so much. There's only one thing left to do: keep going. But if you ever need to check back on what you've learned, these videos will still be available to you. Right now, I'm excited for you to meet your instructor for the next course, Aiyana. She's ready to guide you through the next part of the program as you continue in your journey to becoming a data analyst. You've learned how to prepare and process data, and in the next course, Aiyana will show you how to analyze it.

We'll explore how to make sense of all the data you've collected and cleaned. And you'll learn how to ask the right questions and use data to find answers. We'll also show you how to organize and format the data once again, so it's completely ready for analysis. We'll talk about aggregation and joins, two processes that allow you to gather all the data you need and summarize it for your stakeholders. Both spreadsheets and SQL will make an appearance too. We'll give you some more practice with using them for calculations. We'll explain how temporary tables in SQL work.

Awesome job so far and best of luck on what's next!
