

Upload the movie dataset to BigQuery

The next video demonstrates how to use SQL to filter data in a large dataset in BigQuery.

If you would like to follow along with the instructor, you will need to log in to your BigQuery account and upload the movie dataset provided as a .csv file.

Prepare for the next video

First, download the .csv file from the attachment below:

- Note: If the .csv files open in a new tab instead of downloading to your machine, follow these instructions:
 - Select File from the menu bar, then select Save as Google Sheets. This will open the .csv file as a Google Sheet.
 - Select File from the menu bar, then select Download from the dropdown menu, then select Comma Separated Values (.csv).

Next, complete the following steps in your BigQuery console to upload the movie dataset.

Step 1: Open your BigQuery console and click on the project you want to upload the data to.

Step 2: In the Explorer on the left, click the Actions icon (three vertical dots) next to your project name and select Create dataset.

Step 3: In the upcoming video, the name `movie_data` will be used for the dataset. If you plan to follow along with the video, enter `movie_data` for the Dataset ID. In the *Location Type* section, select Multi-region, then from the *Multi-region* dropdown select US (multiple regions in United States), and make sure the default *Encryption* method within the Advanced options is set to the `Google_managed` encryption key.

Dataset ID *

movie_data

Letters, numbers, and underscores allowed

Location type ?

Region

Specify a region to colocate your datasets with other GCP services.

Multi-region

Allow BigQuery to select a region within a group to achieve higher quote limits.

Multi-region *

US (multiple regions in United States)

Default table expiration

Enable table expiration ?

Default maximum table age

Days

Advanced options

Encryption ?

Google-managed encryption key

No configuration required

Customer-managed encryption key (CMEK)

Manage via [Google Cloud Key Management Service](#)

Case Insensitive

Enable case insensitive table names ?

Default Collation

Enable default collation ?

Default Collation

Default Rounding Mode

The dataset default rounding mode will be applied to any new table created within this dataset.

CREATE DATASET

CANCEL

Step 4: Click CREATE DATASET (blue button) to add the dataset to your project.

Step 5: In the Explorer on the left, click to expand your project and then click the movie_data dataset you just created.

Step 6: A new window will appear titled movie_data, and make a note of the Dataset ID.

Step 7: Towards the right hand side of the page, you will see a tab row of additional commands. Click the first blue button titled + CREATE TABLE at the top right. A new window titled *Create table* will appear.

Partitioning
No partitioning ?

CREATE TABLE

CANCEL

Step 8: Under *Source*, for the *Create table from* dropdown, select the data source.

- Select Upload.
- Click Browse to select the movie_data.csv file you downloaded.
- Select CSV from the file format dropdown, but BigQuery should automatically change the format.

Step 9: Under *Destination*, for the *Table* name, enter movies to match the table in the video.

Step 10: Under *Schema*, click the Auto detect checkbox.

Step 11: Expand the *Advanced options* menu and change Column name character map to V2. This allows parentheses to be used in column names. If you don't do this and just

leave the default character map, the table will fail to be created because BigQuery will not recognize parentheses in the column names as valid characters.

Step 12: Once all of the settings have matched the image above, click the CREATE TABLE (blue button) at the bottom. You will now see the movies table under your movie_data dataset in your project.

Step 13: Click movies and then select the Preview tab. Confirm that you have access to the appropriate table.

The screenshot shows the Google Cloud Platform BigQuery Explorer interface. On the left, the 'Explorer' pane shows the project 'loyal-glass-371423' with a dataset 'movie_data' containing a table named 'movies'. The main pane displays the 'movies' table in the 'PREVIEW' tab, showing 25 rows of data. The table has columns for Row, Movie_Title, Release_Date, Wikipedia_URL, Genre, Director_1, Director_2, Cast_1, and Cast_2. The data includes movies like 'No Good Deed', 'Prisoners', 'Secret in Their Eyes', 'American Sniper', 'Argo', 'Beasts of the Southern Wild', 'Carol', 'Cloud Atlas', 'Jersey Boys', 'Money Monster', 'Mustang', 'Rams', 'Salmon Fishing in the Yemen', 'Silver Linings Playbook', 'The Drop', 'The Infiltrator', 'The Water Diviner', 'The Young Messiah', 'Truth', '22 Jump Street', '71', 'A Good Day to Die Hard', 'Battleship', 'Black Mass', and 'Criminal'.
