

Test your knowledge on sorting data in spreadsheets

1. Which menu function sorts all spreadsheet data by the ranking of a specific sorted column?

1 / 1 point

- ☒ Sort sheet
- ☐ Sort by rank
- ☐ Sort data
- ☐ Sort range

✓ Correct

Sort sheet sorts all spreadsheet data by the ranking of a specific sorted column.

2. When using the **`SORT`** function in spreadsheets, which statement will return the data in ascending order?

1 / 1 point

- ☐ **`FALSE`**
- ☐ **`REVERSE`**
- ☒ **`TRUE`**
- ☐ **`ASCEND`**

✓ Correct

When using the **`SORT`** function in spreadsheets, a **`TRUE`** statement will return the data in ascending order.

3. Fill in the blank: A customized sort order involves sorting data in a spreadsheet using _____ conditions.

1 / 1 point

- ☒ multiple
- ☐ random
- ☐ interactive
- ☐ statistical

✓ Correct

A customized sort order involves sorting data in a spreadsheet using multiple conditions. This means that the sorting will be based on the order of the conditions selected.

4. Why would a data professional select **Data has a header row** when sorting data in a spreadsheet?

1 / 1 point

- ☐ To remove duplicate rows from the sorted data
- ☐ To insert a new row above the first row of the spreadsheet prior to sorting
- ☒ To ensure the first row of data is treated as header labels instead of data points
- ☐ To hide the first row of the spreadsheet in order to better organize the sort

✓ Correct

A data professional selects **Data has a header row** when sorting data in a spreadsheet to ensure the first row of data is treated as header labels instead of data points.
