

Module 1 challenge

1. A data analyst at a high-tech manufacturer sorts inventory data in a spreadsheet. They sort all data by ranking in the Order Frequency column, keeping together all data across rows. What spreadsheet tool are they using?

1 / 1 point

- ☒ Sort sheet
- ☐ Sort column
- ☐ Sort together
- ☐ Sort rows

✓ Correct

2. Fill in the blank: To filter for all students in the Sophomore table who live in Fairfield County, a data professional uses the _____ clause in SQL.

1 / 1 point

- ☐ EXCEPT
- ☐ LIMIT
- ☐ FILTER
- ☒ WHERE

✓ Correct

3. A junior data analyst for a retailer discovers that, beginning three months ago, the number of units sold of printer paper has suddenly increased tenfold. She calls the inventory manager at the distribution center to check if the unit label changed from cases to reams. What phase of analysis is the analyst in?

1 / 1 point

- ☐ Transform data
- ☐ Organize data
- ☐ Format and adjust data
- ☒ Get input from others

✔ Correct

4. Which of the following statements accurately describe sorting and filtering? Select all that apply.

1 / 1 point

- ☒ Filtering enables data professionals to view the data that has bugs or errors.

✔ Correct

- ☒ Sorting enables data analysts to rank data based on a specific metric.

✔ Correct

- ☒ Filtering is effective at reducing the amount of data that is displayed.

✔ Correct

- ☐ Sorting can be performed with SQL, but not in spreadsheets.

5. You're a data analyst for a sports arena who wants to better understand their customers who attend soccer games. At every event, attendees are asked to fill out a survey. The sports arena keeps the responses in the data table **CustomerSurveys**. Which query should you use to examine only the data from customers who attended **soccer** games?

1 / 1 point

```
1 SELECT event = 'soccer'
2 FROM CustomerSurveys;
3
```

```
1 SELECT *
2 FROM CustomerSurveys
3 WHERE 'soccer';
4
```

```
1 SELECT *
2 FROM CustomerSurveys
3 FILTER = 'soccer';
4
```

```
1 SELECT *
2 FROM CustomerSurveys
3 WHERE event = 'soccer';
4
```

✔ Correct

6. Which query will return a list of all corn farms that have made more than \$4 million, ordered by the greatest number of years in business to the fewest number of years in business?

1 / 1 point

```
1 SELECT *
2 FROM `FarmsDirectory`
3 WHERE Crop = 'Corn'
4 AND Revenue > 4000000
5 ORDER BY Years_in_business ASC;
6
```

```
1 SELECT *
2 FROM `FarmsDirectory`
3 WHERE Crop = 'Corn'
4 AND Revenue > 4000000
5 ORDER BY Years_in_business DESC;
6
```

```
1 SELECT *
2 FROM `FarmsDirectory`
3 WHERE Crop = 'Corn', Revenue < 4000000
4 ORDER BY Years_in_business ASC;
5
```

```
1 SELECT *
2 FROM `FarmsDirectory`
3 WHERE Crop = 'Corn'
4 WHERE Revenue > 4000000
5 ORDER BY Years_in_business DESC;
6
```

7. A data professional at a manufacturing company is tasked with identifying which machines are most likely to need repairs. In the analyze phase of the data analysis process, what activities might this involve? Select all that apply.

1 / 1 point

☒ Format the data to filter for machines that need the most maintenance

✓ Correct

☒ Organize a dataset by machine type and performance levels

✓ Correct

☒ Get input from colleagues on the data team

✓ Correct

☐ Prepare a report for the stakeholders

8. Which function sorts a spreadsheet range between cells K1 and L80 in ascending order by the first column, Column K?

1 / 1 point

☐ =SORT(K1:L80, A, FALSE)

☐ =SORT(K1:L80, A, TRUE)

☐ =SORT(K1:L80, 1, FALSE)

☒ =SORT(K1:L80, 1, TRUE)

✓ Correct

9. A data analyst is using the menu of a spreadsheet to sort their data. As they examine their dataset, they notice that one column appears to be incorrect. It is sorted in alphabetical order, but the cells are no longer associated with the row they're in. What is the most likely cause of this problem?

1 / 1 point

☒ They sorted only the data in the column, rather than sorting the sheet by that column.

☐ They sorted the sheet by column but sorted by the wrong column.

☐ They sorted only the data in the column, rather than sorting the sheet by row.

☐ They sorted the sheet by row instead of column.

✓ Correct

10. Which query will return `song_title`, `artist_name`, and `album_title` in alphabetical order by `artist_name`?

1 / 1 point

```
1 SELECT song_title, artist_name, album_title
2 FROM music_db.songs
3 ORDER BY artist_name;
4
```

```
1 SELECT song_title, artist_name, album_title
2 FROM music_db.songs
3 ORDER BY song_title DESC;
4
```

```
1 SELECT song_title, artist_name, album_title
2 FROM music_db.songs
3 ORDER BY album_title;
4
```

```
1 SELECT playlist_name, creation_date
2 FROM music_db.playlists
3 ORDER BY creation_date DESC;
4
```

Correct
