

Get started with data formatting

Hey, it's great to have you back! You've learned so much already, and now you're ready to start analyzing data. Coming up, we'll cover some final things you'll need to do for your analysis to make sure your data is formatted and adjusted correctly. We'll start converting and formatting your data; using data **validation** in spreadsheets; and conditional formatting. You'll also learn how to combine multiple pieces of data. And finally, we'll talk about how to get support during your analysis and find resources whenever you're stuck. These skills will help make sure that your data analysis process is as smooth as possible. And even when it isn't, you'll know how to tackle any problems that might come up.

A big piece of being an analyst is troubleshooting and problem-solving. You're as good of an analyst as your ability to ask the right questions, which is why we'll spend some time learning about problem-solving strategies you can use during analysis. So whenever you're ready to start learning about data formatting and solving problems, head to the next video, and we'll get started.
