

Test your knowledge on combining multiple datasets

1. Which SQL function combines groups of text strings from multiple cells in order to create a new string?

1 / 1 point

- ☒ `CONCAT`
- ☐ `COMBINE`
- ☐ `CONSOLIDATE`
- ☐ `CONNECT`

✓ Correct

The function `CONCAT` combines groups of text strings from multiple cells in order to create a new string.

2. What SQL clause can be added to this query to ensure only the first 50 results are returned?

1 / 1 point

```
1  SELECT *
2  FROM Leaf_Database
3  WHERE tree_type = maple
```

- ☒ `LIMIT 50`
- ☐ `FIRST 50`
- ☐ `RETURN 50`
- ☐ `ONLY 50`

✓ Correct

The SQL clause `LIMIT 50` will ensure only the first 50 results are returned.

3. A data professional runs a query that will return a dataset containing numbers out to five decimal places. Which SQL function will limit the records to two decimal places?

1 / 1 point

- ☐ NUM
- ☐ LEN
- ☒ ROUND
- ☐ LIMIT

✓ Correct

The **ROUND** function will limit the records to two decimal places. **ROUND** returns a number rounded to a certain number of decimal places.

4. Which function will return the number of characters in spreadsheet cell F8 in order to confirm it contains exactly 15 characters?

1 / 1 point

- ☐ =LEN (15)
- ☐ =LEN (15, F8)
- ☐ =LEN (F8, 15)
- ☒ =LEN (F8)

✓ Correct

The function **=LEN (F8)** will return the number of characters in spreadsheet cell F8 in order to confirm it contains exactly 15 characters. The **LEN** function returns the length of a string of text by counting the number of characters it contains.
