

Upload the employee dataset to BigQuery

This reading outlines the steps you need to perform before watching the video and following along in the step-by-step guide, [Explore how JOINS work](#).

What you will need

Download the two .csv files from the attachments below:

Then, log in to your BigQuery account and follow along with this reading to upload the employee data provided as two new tables.

Prepare for the next video

Create a new dataset

1. Open your BigQuery console and select the project to which you'll upload data. For the purpose of this reading, the example project is named dac5bigquery. Your project will have a different name.
2. From the Explorer pane, select the Actions icon (the three vertical dots) next to your project name. Then select Create dataset.

3. In the Create dataset window, enter employee_data for the Dataset ID.
4. Make sure the Location type is set to Multi-region with US(multiple regions in the United States) selected.
5. Leave the Advanced options set to their default settings.

Create dataset

Encryption ?

- ☒ Google-managed encryption key
No configuration required
- ☐ Customer-managed encryption key (CMEK)
Manage via [Google Cloud Key Management Service](#)

Case Insensitive

☐ Enable case insensitive table names ?

Default Collation

☐ Enable default collation ?

Default Collation ▼

Default Rounding Mode

CREATE DATASET

CANCEL

6. Select CREATE DATASET to add the dataset to your project. It will now appear under your project in the Explorer pane. If you don't see the new dataset listed, select the arrow next to your project in the Explorer pane to expand its contents.

7. In the Explorer pane, select the employee_data dataset you just created. The Dataset info window opens in the Details pane.

Create the employees table

Create a table for the employees within your employee_data dataset. To do this:

1. Select + CREATE TABLE from the options in the Details pane. Under Source:

- From the dropdown in the field Create table from, select Upload.
- From the Select file field, select BROWSE. Then, find and select the [Employees Table - Understanding JOINS.csv](#) File you downloaded previously.
- The file format should be automatically detected after selecting the Employee Table .csv file. If it's not, select CSV from the File format drop-down.

2. Under Destination:

- Enter employees in the Table field.
- Project, Dataset, and Table type will be automatically filled. You do not need to update these fields.

3. Under Schema, select the Auto detect checkbox.

Partition and cluster settings

Partitioning

No partitioning

?

Clustering order

?

Clustering order determines the sort order of the data. Clustering can be used on both partitioned and non-partitioned tables.

CREATE TABLE

CANCEL

4. Select CREATE TABLE. The employees table will be nested under employee_data in the Explorer pane.

Create a departments table

Next, create a table for the departments within the employee_data dataset. To do this:

1. Select the employee_data dataset from the Explorer panel.
2. Select + CREATE TABLE from the options located in the main editor window.
3. Under Source:
 - From the dropdown in the field Create table from, select Upload from the list of options.
 - From the Select file field, select BROWSE. Find and select the [Departments Table - Understanding JOINS](#).csv File you downloaded previously.
4. The file format may be automatically detected after selecting the Departments Table .csv file. If it's not, select CSV from the File format drop-down.
5. Under the Destination section:
 - Enter departments in the Table field.
 - Project, Dataset, and Table type will be automatically filled out so you do not need to update these fields.
6. Under Schema, select the Auto detect checkbox.

Clustering order determines the sort order of the data. Clustering can be used on both partitioned and non-partitioned tables.

CREATE TABLE

CANCEL

7. Select CREATE TABLE in the Create Table window. The departments table will appear under the employee_data dataset listed within your project.

Verify the data

Make sure that you've uploaded the tables correctly by previewing the tables you just created.

1. From the Explorer pane, select the employees table.
2. Select the Preview tab to verify that you have the following data:

The screenshot shows a data platform interface. On the left is an 'Explorer' sidebar with a search bar and a tree view of workspace resources. The tree shows 'dac5bigquery' containing 'employee_data', 'departments', and 'employees'. The 'employees' table is selected. The main panel displays the 'employees' table with tabs for SCHEMA, DETAILS, PREVIEW (selected), LINEAGE, DATA PROFILE, and DATA QUALITY. The PREVIEW tab shows a table with 6 rows and 4 columns: Row, name, department_id, and role.

Row	name	department_id	role
1	Dave Smith	1	Product Marketing Manager
2	Scott Tanner	1	Director of Demand Gen
3	Margaret Lane	1	VP of Marketing
4	Julie Jones	2	Software Engineer
5	Ted Connors	2	Software Engineer
6	Mary Martin	5	Receptionist

3. Select the departments table.

4. Select the Preview tab to verify that you have the following data:

The screenshot shows the same data platform interface, but now the 'departments' table is selected in the Explorer sidebar and its PREVIEW tab is active. The table has 4 rows and 3 columns: Row, name, and department_id.

Row	name	department_id
1	Marketing	1
2	Engineering	2
3	Accounting	3
4	Sales	4

There are six rows in the table. In Row 1: name: Dave Smith; department_id: 1; role: Product Marketing Manager. In Row 2: name: Scott Tanner; department_id: 1; role: Director of Demand Gen.

When your data previews match these instructions, you are ready to follow along with the step-by-step guide and video on [Explore how JOINS8 work](#).
