1. In this spreadsheet, which function will sum only the values from column B that cost more than \$40?

1 / 1 point

	A	B
1	Expense	Amount
2	screwdrivers	\$68.00
3	hammers	\$30.00
4	pliers	\$55.00
5	wrenches	\$41.00
6	nails	\$22.00
7	duct tape	\$18.00
8	saw	\$79.00
9	files	\$45.00
10	paint	\$90.00
11	bolts	\$19.00
12	brushes	\$33.00

- ☐ =SUMIF(B2:B12,<40)
- ☒ =SUMIF(B2:B12,">40")
- ☐ B: =SUMIF(B2:B12,"<40")
- ☐ =SUMIF(B2:B12,>40)

✓ **Correct**

To sum only the values from column B that cost more than \$40, the function is =SUMIF(B2:B12,">40"). B2:B12 is the range, and more than 40 (>40) is the criteria.

2. Fill in the blank: The spreadsheet function _____ returns the number of cells within a range that match a specified value.

1 / 1 point

- ☐ ARRAY
- ☐ COUNT DISTINCT
- ☒ COUNTIF
- ☐ VALUE

✓ **Correct**

The spreadsheet function COUNTIF returns the number of cells within a range that match a specified value. The syntax is =COUNTIF(range, criteria).

3. What is an example of an array in a spreadsheet?

1 / 1 point

- ☐ All cells with values greater than 100
- ☐ Cells D7, E14, and F20
- ☒ The values in cells B2 through B31
- ☐ All cells with number values

✓ **Correct**

The values in cells B2 through B31 is an example of an array. An array is a collection of values in spreadsheet cells.

4. Which function will calculate the sum of the products of the corresponding items in the arrays M1:M4 and P1:P4?

1 / 1 point

- ☒ =SUMPRODUCT(M1:M4, P1:P4)
- ☐ =MULTIPLY(M1:M4, P1:P4)
- ☐ =PRODUCT(M1:M4, P1:P4)
- ☐ =ARRAY(M1:M4, P1:P4)

✓ **Correct**

The function =SUMPRODUCT(M1:M4, P1:P4) will calculate the sum of the products of the corresponding items in the arrays M1:M4 and P1:P4. This means it will multiply the corresponding items in each array, then add the products together.
