

Test your knowledge on using SQL with temporary tables

1. When working with a temporary table in a SQL database, at what point will the table be automatically deleted?

1 / 1 point

- ☐ After running a report from the table
- ☐ After completing all calculations in the table
- ☐ After running the query in the SQL database
- ☒ After ending the session in the SQL database

✓ **Correct**

The temporary table will be automatically deleted after ending the session in the SQL database.

2. What data will appear in the temporary table created through this query?

1 / 1 point

```
1 WITH plant_variety AS (  
2   SELECT *  
3   FROM bigquery-public-data.plants.African_species  
4   WHERE daily_growth_rate_percentage = 0.05  
5 )
```

- ☒ Plant varieties that grow exactly 0.05 percent per day
- ☐ A random subset of African plant species
- ☐ Plant varieties that are equal to 0.05 inches tall
- ☐ All plant species that exist in the public dataset

✓ **Correct**

The temporary table will contain plant varieties that grow exactly 0.05 percent per day. The name of the temporary table is plant_variety and the query includes the condition that the growth rate equals 0.05 percent per day.

3. Fill in the blank: A data analyst uses _____ to copy data from one table into a temporary table without adding the new table to the database.

1 / 1 point

- ☐ COPY TO
- ☐ WITH
- ☒ SELECT INTO
- ☐ TEMP

✓ Correct

A data analyst uses **SELECT INTO** to copy data from one table into a temporary table without adding the new table to the database. This is useful for making a copy of a table with a specific condition.

4. Why might a data professional add a **CREATE TABLE** statement to a temporary table?

1 / 1 point

- ☒ Give multiple people access to the table
- ☐ Create a second table within the temporary table
- ☐ Automate calculations in the table
- ☐ Include metadata about the data in the table

✓ Correct

A data professional might add a **CREATE TABLE** statement to a temporary table to give multiple people access.
