

Test your knowledge on designing data visualizations

1. Which element of design can add visual form to data and help build the structure of a visualization?

1 / 1 point

- ☐ Space
- ☐ Movement
- ☒ Line
- ☐ Shape

✓ **Correct**

A line can add visual form to data and help build the structure of a visualization.

2. What term describes how bright or dull a color is within a data visualization?

1 / 1 point

- ☐ Value
- ☒ Intensity

✓ **Correct**

Intensity describes how bright or dull a color is within a data visualization.

- ☐ Vibrance
- ☐ Hue

3. Fill in the blank: Design thinking is a process used to solve complex problems in a _____ way.

1 / 1 point

- ☐ prescriptive
- ☒ user-centric
- ☐ linear
- ☐ technical

✓ **Correct**

Design thinking is a process used to solve complex problems in a user-centric way. It enables data analysts to identify alternative strategies for visualizations.

4. While designing a data visualization, you consider whether the colors you chose will be easily viewed and understood by your stakeholders. What stage of design thinking does this scenario describe?

1 / 1 point

- ☐ Ideate
- ☐ Define
- ☐ Test
- ☒ Empathize

✔ Correct

Considering appropriate colors for a data visualization is part of the empathize stage, which involves thinking about the emotions and needs of your audience.
