

Creating
effective
visualizations

Choose the best visualization

As a data analyst, you'll use creativity to help others quickly understand data. Review a series of data types, and identify the best visualization for each one.

Identify the most effective visualization

Review the scenario and select the best data visualization from the list.

Scenario

Data type

Changes in company stock price

Communication goal

Demonstrate that your company's stock price is trending upwards over the long term

Select data visualization option

You're done!

Data visualization means understanding the data—and knowing what you need to communicate it to others.
