

Test your knowledge on creating visualizations in Tableau

1. What color combination does a diverging color palette use to display characteristics of values?

1 / 1 point

- ☒ Intensity for the magnitude and hue for the range
- ☐ Value for the range and tint for the margin of error
- ☐ Shade for the accuracy and grayscale for the reliability
- ☐ Intensity for the range and hue for the magnitude

✓ Correct

A diverging color palette uses intensity for the magnitude and hue for the range to display characteristics of values.

2. A data analyst creates a Tableau visualization to compare international trade routes. Which color choices could be misleading?

1 / 1 point

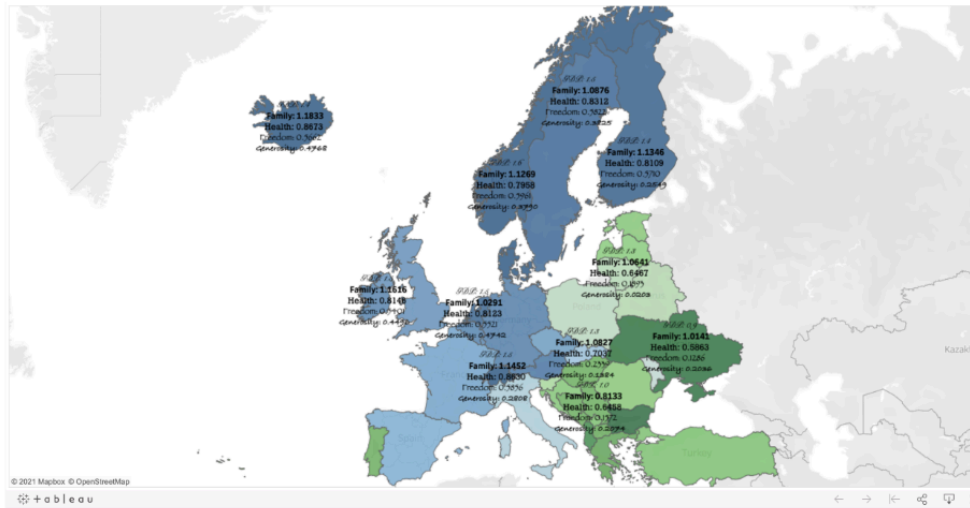

- ☐ Blue and gray
- ☒ Green and red
- ☐ Beige and purple
- ☐ Orange and brown

✓ Correct

Many people associate green with positive results and red with negative results. They could be misleading in this data visualization because green might falsely represent a trade surplus for the EU and red might falsely represent a trade deficit for Australia.

3. In this visualization, what steps could you take to adjust the labels in order to make the visualization more effective? Select all that apply.

1 / 1 point

- ☐ Change the font color for the labels from black to white
- ☐ Move the labels to white space on the map
- ☒ Reduce the number of labels

✓ Correct

To make the visualization more effective, you could reduce the number of labels and use a single font for the labels.

- ☒ Use a single font for the labels

✓ Correct

To make the visualization more effective, you could reduce the number of labels and use a single font for the labels.

4. If stakeholders prefer to view data in a spreadsheet-type format, what can be added to a Tableau visualization?

1 / 1 point

- ☐ Key
- ☐ Legend
- ☐ Headers and footers
- ☒ Companion table

✓ Correct

If stakeholders prefer to view data in a spreadsheet-type format, a companion table can be added to a Tableau visualization. Companion tables show the same data in a different way.
