

Test your knowledge on data-driven stories

1. Fill in the blank: A data professional uses a _____ as a central location to organize information from multiple datasets for tracking, analysis, and visualization.

1 / 1 point

- ☐ data warehouse
- ☒ dashboard
- ☐ framework
- ☐ data channel

✓ **Correct**

A data professional uses a dashboard as a central location to organize information from multiple datasets for tracking, analysis, and visualization.

2. Which of the following activities are aspects of data storytelling? Select all that apply.

1 / 1 point

- ☒ Communicate the meaning of a dataset with visuals

✓ **Correct**

Data storytelling involves communicating the meaning of a dataset with visuals and using a narrative that is customized to your audience.

- ☐ Describe the steps of your analysis process
- ☐ Select data points that support your case
- ☒ Use a narrative that is customized to your audience

✓ **Correct**

Data storytelling involves communicating the meaning of a dataset with visuals and using a narrative that is customized to your audience.

3. A data analyst presents their data story to an audience. They prioritize capturing and holding the audience members' interest and attention. Which data storytelling concept does this describe?

1 / 1 point

- ☒ Engagement
- ☐ Primary message
- ☐ Narrative
- ☐ Visuals

✓ **Correct**

This describes engagement, which involves capturing and holding the audience members' interest and attention.

4. What activities are elements of the spotlighting process? Select all that apply.

1 / 1 point

- ☒ Search for broad, universal ideas and messages

✓ **Correct**

Spotlighting involves scanning through data to quickly identify the most important insights. This can be done with notes on a whiteboard, by searching for broad ideas, and by identifying concepts that arise repeatedly.

- ☒ Write notes on a white board that contain the data analysis insights

✓ **Correct**

Spotlighting involves scanning through data to quickly identify the most important insights. This can be done with notes on a whiteboard, by searching for broad ideas, and by identifying concepts that arise repeatedly.

- ☐ Focus on the details of the analysis and results

- ☒ Identify ideas or concepts that arise repeatedly

✓ **Correct**

Spotlighting involves scanning through data to quickly identify the most important insights. This can be done with notes on a whiteboard, by searching for broad ideas, and by identifying concepts that arise repeatedly.
