

Test your knowledge on the data analysis process

1. A junior data analyst is assigned a new project. They define the problem that they need to help solve and confirm they understand expectations. Which step of the data analysis process are they working in?

1 / 1 point

- ☒ Ask
- ☐ Prepare
- ☐ Share
- ☐ Analyze

✓ **Correct**

They are working in the ask step. This involves defining the problem to be solved and confirming understanding of expectations.

2. What is the term for people who invest time and resources into a project and are interested in the outcome?

1 / 1 point

- ☒ Stakeholders
- ☐ Subject-matter experts
- ☐ Data analysts
- ☐ Data designers

✓ **Correct**

Stakeholders are people who invest time and resources into a project and are interested in the outcome.

3. Fill in the blank: In the process step, data analysts may remove _____, which are data points that lie significantly outside the overall pattern of the data and could potentially skew the information.

1 / 1 point

- ☒ outliers
- ☐ values
- ☐ observations
- ☐ statistics

✔ **Correct**

In the process step, data analysts may remove outliers, which are data points that lie significantly outside the overall pattern of the data and could potentially skew the information.

4. Which step of the data analysis process is most likely to involve creating visuals that help people understand complex facts and figures?

1 / 1 point

- ☒ Share
- ☐ Prepare
- ☐ Act
- ☐ Ask

✔ **Correct**

The share step of the data analysis process is most likely to involve creating visuals that help people understand complex facts and figures.
