

Test your knowledge on making fair business decisions

1. In a data analytics context, what is a business task?

1 / 1 point

- ☒ The question answered, or problem solved, by data analysis
- ☐ The development of company goals or objectives
- ☐ The effective, ongoing management of resources
- ☐ The implementation of new strategies that advance the organization

✓ **Correct**

In a data analytics context, a business task is the question answered, or problem solved, by data analysis.

2. Fill in the blank: Fairness means ensuring that bias is neither created nor _____ by the data analysis process.

1 / 1 point

- ☒ reinforced
- ☐ subverted
- ☐ diminished
- ☐ modified

✓ **Correct**

Fairness means ensuring that bias is neither created nor reinforced by the data analysis process.

3. What are some strategies data professionals use to ensure their data analysis is unbiased? Select all that apply.

1 / 1 point

☒ Consider the complicated social contexts that could create bias

✔ **Correct**

To ensure their data analysis is unbiased, data professionals consider the complicated social contexts that could create bias, prioritize fairness during data collection, and ensure anything shared with stakeholders is presented in context.

☒ Prioritize fairness during data collection

✔ **Correct**

To ensure their data analysis is unbiased, data professionals consider the complicated social contexts that could create bias, prioritize fairness during data collection, and ensure anything shared with stakeholders is presented in context.

☒ Ensure anything shared with stakeholders is presented in context

✔ **Correct**

To ensure their data analysis is unbiased, data professionals consider the complicated social contexts that could create bias, prioritize fairness during data collection, and ensure anything shared with stakeholders is presented in context.

☐ Disregard systemic factors that may affect the data

4. A data professional notices that their dataset is imbalanced and therefore is not representative of the entire population. They work to get more responses from nondominant groups in order to address this issue and ensure data insights are fair. What does this scenario describe?

1 / 1 point

☒ Oversampling

☐ Data cleaning

☐ Context

☐ Data strategy

✔ **Correct**

This scenario describes oversampling. Oversampling is the process of increasing the sample size of nondominant groups in order to better represent them and address imbalance datasets.
