

Module 4 challenge

1. Which of the following statements accurately describe fairness considerations in data analysis? Select all that apply.

0.5 / 1 point

☒ Fairness means ensuring that analysis does not create or reinforce bias.

✓ Correct

☒ A data professional may include self-reported data when prioritizing fairness.

✓ Correct

☒ Fairness practices should begin during the prepare phase of the data analysis process.

✗ This should not be selected
Review [the reading about fairness](#). [↗](#)

☐ Best practices for fairness in data analysis include considering all available data.

2. An HR firm is filling open positions for administrative assistants, so they purchase online help-wanted ads. Research reveals that 87% of administrative assistants are women, so the data team decides that women are more likely to be successful applicants. Therefore, they target the ads to female job seekers. What should they have done instead?

1 / 1 point

- ☒ Conduct more research to understand the surrounding factors of this situation.
- ☐ Ask the executive team to decide which type of applicants to target with the ads.
- ☐ Only target the ads for the administrative assistant jobs to men.
- ☐ Find an additional data source that supports the strategy to target women.

✓ Correct

3. Which fairness best practice is intended to help data teams better understand the context surrounding their data analysis conclusions?

1 / 1 point

- ☐ Use oversampling
- ☐ Consider relevant data
- ☒ Identify surrounding factors
- ☐ Include self-reported data

✔ Correct

4. On a city train line, peak ridership occurs between 7 AM and 7 PM. The fairness of a passenger survey could be improved by over-sampling riders from which group?

0 / 1 point

- ☐ Passengers who ride the train during peak times
- ☒ Passengers who are senior citizens
- ☐ Passengers who are young working professionals
- ☐ Passengers who ride the train during off-peak times

✘ Incorrect

5. Fill in the blank: Data analysts focus much of their time working on _____, which are the questions or problems that analysis can help address for an organization.

1 / 1 point

- ☐ measurable outcomes
- ☐ relevant processes
- ☐ stated objectives
- ☒ business tasks

✔ Correct

6. A data team at a car dealership considers fairness when collecting data. Instead of having salespeople share observations, they create a survey that asks customers to provide information about their own car-buying experiences. This helps avoid any unconscious bias that might be introduced by the salespeople. Which fairness best practice does this scenario describe?

1 / 1 point

- ☐ Using all available data
- ☒ Self-reporting
- ☐ Oversampling
- ☐ Considering context

✔ Correct

7. A data analyst at a government agency researches ways to reduce traffic congestion. Rather than using only data about when and where traffic occurs, the analyst considers public transportation usage, road and weather conditions, and more. This enables them to achieve more insightful results. Which fairness best practice does this scenario describe?

1 / 1 point

- ☐ Oversampling
- ☐ Including self-reported data
- ☐ Guiding business strategy
- ☒ Considering all available data

✓ Correct

8. Fill in the blank: A data professional considers fairness from the start of a project to the point when their organization _____ in order to ensure their data analysis is fair.

0 / 1 point

- ☒ presents findings to stakeholders
- ☐ acts on the data insights
- ☐ collects data for the project
- ☐ cleans and organizes the data

✗ Incorrect
