

Module 1

Introduction

[00:00](#) Hey there!

[00:01](#) Coming up, we have many exciting things to discover about the cloud!

[00:04](#) Here's a quick breakdown.

[00:05](#) First, we'll check out the basics of cloud data analytics.

[00:09](#) You'll learn about its history and explore the many benefits of cloud computing.

[00:14](#) After that, you'll consider the differences between cloud computing and traditional computing.

[00:19](#) This includes their network infrastructures, defining characteristics, and advantages and limitations.

[00:24](#) Next, you'll tap into the program resources so you can make a plan to be successful and career-ready.

[00:31](#) To wrap up, peruse the glossary, with key terms and definitions.

[00:34](#) Meet you again soon!

[00:35](#) Hi, I'm Joey!

[00:36](#) Here, at Google, I am an analytics manager.

[00:37](#) This means that I lead a team of business analysts whose job is to provide data-backed insights to inform key business decisions.

[00:39](#) One of my favorite projects has been our support of future workplace design, where we've

[00:39](#) partnered with architects, program managers, and UX teams to design a new office experience for Googlers.

[00:42](#) We've been able to use data to better understand what Googlers need from the office, and translate those needs into real spaces and services used by close to 200,000 people.

[00:44](#) I grew up in a single parent household in the Los Angeles area, with strong roots in my Mexican-American heritage.

[00:46](#) Living in a big, diverse, complicated city like LA —while challenging at times— definitely instilled in me a passion for

[00:47](#) connecting with diverse groups and helped me build interpersonal skills that have been super valuable in life and in my career.

[00:49](#) My career path wasn't linear or planned, but through an internship and an early career-rotational program, I discovered a passion

[00:50](#) for data analytics, and specifically using data to help people make better decisions or gain knowledge they wouldn't have otherwise.

[00:52](#) I studied Philosophy and worked at a pizza place for three summers!

[00:53](#) I did a non-technical internship at Google and that turned into a job and allowed me to eventually shift into a technical role.

[00:55](#) I've gotten to try out a lot of different fields like HR Operations, K-12 Education Outreach, and Business Intelligence.

[00:57](#) My goal is to become a role model to other underrepresented groups.

[00:58](#) I want to inspire people to discover new passions and achieve what they may not have thought was possible.

[01:00](#) As an analyst, I want to show folks that data is for everyone, and make technical work less intimidating and more approachable to everyone.
