

Welcome to module 2

Hi there!

Welcome to the next section, where you'll continue learning about data analytics in the cloud!

In this section, you'll explore migrating data to the cloud from on-premises systems, and together, we'll get into the differences between on-premises, hybrid, and cloud data system architectures.

You'll also learn a lot about the Google Cloud Architecture Framework throughout.

You'll witness cloud's impact on data analytics and many other industries.

And you'll check out strategies for cloud cost optimization and its benefits for users.

You'll also explore the cost of storage, running queries, and resource provisioning, along with the different billing models.

This information will help you guide your future employer toward the most cost-effective cloud solution for their particular needs.

Meet you in the next video!
