

Test your knowledge: The impact of cloud data analytics

- ✓ 1. A small startup company with unpredictable demands and limited budget is searching for a cloud service provider. The company needs a provider that allows them to adjust resources based on their changing needs and only charges for the resources the company uses. Which resource provisioning model should they choose?

- ☐ Fixed provisioning
- ✓ ☒ Dynamic provisioning
- ☐ Advanced provisioning
- ☐ Self-provisioning

Dynamic provisioning allows resources to be adjusted based on the user's changing needs and they're only charged for what they use.

- ✓ 2. Which type of data storage is meant only for backup or archiving purposes?

- ☐ Coldline storage
- ✓ ☒ Archive storage
- ☐ Fixed storage
- ☐ Permanent storage

Archive storage keeps data that is only meant for backup or archiving purposes.

- ✓ 3. What is the key difference between ETL and ELT processes?
- ☐ ETL ingests the data after loading it into the warehouse, while ELT ingests the data before loading.
 - ☐ ETL transforms the data after loading it into the warehouse, while ELT transforms it before loading.
 - ☐ ETL examines the data rather than loading it into the warehouse, while ELT examines the data before loading.
 - ✓ ☒ ETL transforms the data before loading it into the warehouse, while ELT transforms it after loading.

ETL stands for extract, transform, and load, which means the data is transformed before it is loaded into the warehouse. ELT stands for extract, load, and transform, which means the data is loaded into the warehouse before transforming.
