

Welcome to module 3

Hi there!

Welcome to the next section in your intro to cloud computing in data analytics!

These topics are all about the data lifecycle —from data entry to data destruction and everything in between.

To start, we'll discuss the basics of data management and introduce safety and privacy considerations.

Next, we'll explore the data lifecycle phases.

You'll experience some really cool examples of data in action.

Then, we'll check out the data analyst's role in the data lifecycle.

You'll learn about many of the different data professionals you might meet in your career and how they all fit into a data lifecycle.

Finally, we'll cover strategies for controlling data lifecycles, including automation, retention policies, and holds and versioning in data management.

There's a lot coming up, and I'm thrilled to be here to guide you through the next exciting step in your cloud journey!

Let's get started!
