

Test your knowledge: Introduction to the data lifecycle

- ✓ 1. A cloud data analytics professional working on a project begins the process of considering how to store the data, prioritize security, and work with personally identifiable information. What stage of the data lifecycle is the project's data currently in?

✓ ☒ Manage

☐ Analyze

☐ Archive

☐ Capture

In the manage stage of the data lifecycle, a data analytics professional determines ways to store data and prioritize security, including PII concerns.

- ✓ 2. A cloud data analytics professional assigned to a project has begun the process of implementing a data plan, assessing the metrics needed, and gathering data from various sources. What stage of the data lifecycle is the project's data currently in?

☐ Manage

☐ Analyze

✓ ☒ Capture

☐ Archive

The data associated with this project is in the capture stage. During the capture stage of the data lifecycle, a plan is implemented, metrics are determined, and data gathered from a variety of sources.

- ✓ 3. A cloud data analytics professional working with project data has so far determined the best method to store the data and prioritize security. They took steps to omit instances of PII and perform additional quality checks. According to the data lifecycle, what is the next action the cloud analytics professional should take?

- ✓ Analyze the data
- ☐ Capture the data
- ☐ Manage the data
- ☐ Archive the data

The next step is to analyze the data. The management decisions about how to store the data, prioritize security, and ensure quality checks are complete. The data is ready to be used to solve problems and support business goals.

- ✓ 4. An organization determines that certain data is no longer useful. Which action should they take next to best support privacy protection guidelines and meet other compliance and regulations?

- ☐ Manage the data
- ☐ Analyze the data
- ✓ Destroy the data
- ☐ Archive the data

Destroying data is an important stage in the data lifecycle to ensure that sensitive data cannot be stolen. Destroying data that the organization deems no longer useful supports privacy protection guidelines, and meets other compliance requirements and regulations.

- ✓ 5. In a project meeting, a data analytics team discusses how to define a business question that will help them create an objective for their project. They also discuss data types that they need to collect. Based on the discussion, which stage of the data lifecycle is the project currently in?

☐ Capture

☐ Analyze

✓ ☒ Plan

☐ Manage

The project is currently in the plan stage. This stage involves answering a particular business question, meeting an objective, and deciding the data types to collect. Additionally, the data team determines project responsibilities, outcomes, and success measures during the plan stage.
