

Test your knowledge: Control data flow in the cloud

- ✓ 1. Which of the following sets of regulations and standards apply to organizations that process personal data of European Union citizens?

- ☐ The Payment Card Industry Data Security Standard
- ✓ ☒ The General Data Protection Regulation
- ☐ The Health Insurance and Portability and Accountability Act
- ☐ The Sarbanes-Oxley Act

The General Data Protection Regulation, or GDPR, requires that reasons for personal data collection must be transparent, and businesses may only use data for the stated collection purpose. GDPR also provides European Union citizens with certain rights and requires that businesses securely store personal data.

- ✓ 2. An organization is creating a data retention policy. Which of the following processes are examples of items addressed within the policy? Select two answers.

- ✓ ☒ An organization's steps and processes for destroying data

An organization's data retention policy provides a detailed description of the organization's data retention process, including processes for destroying data.

- ✓ ☒ An organization's schedule for saving and deleting data

An organization's data retention policy provides a detailed description of the organization's data retention process, including a schedule for saving and deleting data.

- ☐ A data team's requirements for creating cloud data analysis visualizations
- ☐ A data team's requirements for cloud computing services
- ☐ A design team's document for outlining data hardware requirements

- ✓ 1. A data team manager establishes a process for versioning data. This effort supports quality control. What are two more benefits of versioning data? Select two answers.

✓ Revert to a previous version of the data

Versioning helps discover editing and data importing errors, it allows data professionals to revert to the most recent accurate dataset, and it allows data that lives in databases or data warehouses to be cycled out easily.

☐ Streamline data upload

☐ Prevent accidental deletion

✓ Support compliance concerns

Versioning helps discover editing and data importing errors, it allows data professionals to revert to the most recent accurate dataset, and it allows data that lives in databases or data warehouses to be cycled out easily.

☐ Preserve data indefinitely

- ✓ 3. A cloud data analytics professional is preparing a team presentation. The goal of the presentation is to explore ways their organization can automate to streamline data processing. To finalize the presentation, the data professional adds relevant workplace examples. Which of the following workplace examples provides the most support for data automation?

- ✓ ☒ Data automation allows data professionals to multitask, serving several tasks simultaneously.
- ☐ Data automation allows analysts to help prevent accidental deletion and preserve data indefinitely.
- ☐ Data automation allows analysts to revert to a previous version of data, restoring the most recent accurate dataset.
- ☐ Data automation allows data professionals to build secure networks, protect user data, and implement strong access control measures.

One of the ways data automation can assist data professionals is by reducing the need to multitask or be in two places at once. With automation added to key areas of data processing, data moves through its lifecycle quickly and efficiently, freeing up time for meaningful data analysis.
