

Wrap-up

Nice job!

You've made it to the end of this section!

Before moving on, let's review what you've learned in this section.

You explored **data management** when working on a data project.

You also found out about **data teams** and **data cycles** —and how they work together.

Now, let's review some specific key points.

You learned about the importance of **data security and safety**, and **retention** and **deletion** policies.

Then, you explored the stages of the **data lifecycle**.

And you considered the roles in the data lifecycle you might play, plus where your team members make their own contributions.

You then went on to identify how **automating** the data lifecycle can resolve issues and boost efficiency.

Finally, you identified strategies for **safeguarding** and **controlling** data, including **retention policies**, **versioning**, and **holds**.

Congratulations on all of your progress so far!

I can't wait to welcome you to the incredible field of data analytics.
