

Test your knowledge: Introduction to data management

- ✓ 1. As part of the onboarding process for new employees, a company asks for new hires to complete several documents. Much of the data gathered in these documents is personal and must be safeguarded. Which of the following categories of data the employer collects would be classified as personally identifiable information (PII)? Select two answers.

✓ Phone number

A new employee's phone number is an example of PII. This type of data is unique to an individual and therefore can be used to distinguish one person from another. A mailing address is another example of PII.

-
- ☐ Medical diagnoses
- ☐ First name
- ☐ Health care payments
- ✓ Mailing address

A new employee's mailing address is an example of PII. This type of data is unique to an individual and therefore can be used to distinguish one person from another. A phone number is another example of PII.

- ✓ 2. A cloud data analytics professional at a growing company is creating the company's data management plan. Which aspect of the data management plan defines the data roles of anyone who will access the company's data?

- ☐ Storage
- ☐ Data types
- ✓ ☒ Access
- ☐ Archives

Access defines the roles of anyone who will access the data. Access is a key part of the data management plan.

-
- ✓ 3. An organization is seeking additional data security measures. The company's cloud data analytics professional suggests an authentication method that uses a physical digital signature to verify a user's identity before allowing access to resources. Which additional security measure has the company's cloud data analytics professional suggested?

- ☐ Audit
- ☐ General Data Protection Regulations
- ☐ Encryption
- ✓ ☒ Security key

A security key is an authentication method that uses a physical digital signature, or key, to verify a user's identity before accessing specific resources.
