

Test your knowledge: Align data with stakeholder requests

- ✓ 1. The process of responding to a business data request contains several steps. Which data task would take place after completing the data cleaning phase?

- ☐ Break down the dataset
- ✓ ☒ Check for outliers
- ☐ Eliminate repeated records
- ☐ Data wrangling

Checking for outliers is a way to catch mistakes that could corrupt the results of data analysis. This step happens after inaccuracies within the data have been corrected.

- ✓ 2. A data analyst at a streaming video content company receives a business data request for a dashboard presenting viewer engagement. Which of the following considerations should the analyst keep in mind while completing the task? Select two answers.

☐ The amount of time it will take to complete the dashboard

✓ What data is needed and how much

It is best to determine the scope of the data needed to complete the business data request. It is also important to consider what is being measured.

☐ The company resources needed to complete the request

☐ The amount of time needed to analyze the data

✓ What is being measured

It is vital to determine what needs to be measured by the business data request. It is also important to consider the scope of the data needed to complete the business data request.

- ✓ 3. You are a data analyst working for a small startup company. The company's CEO requests that you deliver a data report on the company's customer acquisition cost by marketing channel. Which of the following elements will appear on this business data request?
- ☐ The relevant project and budget proposals
 - ☐ Requests for cloud storage access
 - ☐ The relevant project timetable
 - ✓ ☒ Requests for a data report, extract, or dashboard

A business data request would include the type of request, data-related questions, and requests for a data report, extract, or dashboard.

- ✓ 4. A data professional is responding to a business data request. First, they complete the data cleaning stage. Next, they begin checking the data for any outliers. Which methods would help the data professional review the data collected? Select two answers.

✓ Check summary statistics

The data professional should create summary statistics in a dashboard or spreadsheet that calculates the average, mean, median, minimum, maximum, and other relevant statistics and calculations. The data professional can also integrate multiple data sources to ensure that the information is correct by referencing more than one copy of the data.

☐ Eliminate repeat records

☐ Create data visualizations

☐ Define specific segments

✓ Integrate multiple data sources

The data professional should integrate multiple data sources. This method ensures that the information is correct by referencing more than one copy of the data. The data professional can also check summary statistics.
